Course: Math 105

Assignment: Assignment 5

1. Suppose that an allergist wishes to test the hypothesis that at least 11% of the public is allergic to some cheese products. Explain how the allergist could commit the following types of errors.

- (a) a type I error
 (b) a type II error

(a) The allergist could conclude that (1) _____ of the public are allergic to some cheese products when, in fact,
 (2) _____ are allergic.

(a) The allergist could conclude that (3) _____ of the public are allergic to some cheese products when, in fact,
 (4) _____ are allergic.

- | | | | |
|---|---|---|---------------------------------------|
| (1) <input type="radio"/> less than 11% | (2) <input type="radio"/> less than 11% | (3) <input type="radio"/> less than 11% | (4) <input type="radio"/> 11% or more |

ID: 10.3.1

2. A random sample of 68 bags of white cheddar popcorn weighed, on average, 5.01 ounces with a standard deviation of 0.24 ounce. Test the hypothesis that $\mu = 5.2$ ounces against the alternative hypothesis, $\mu < 5.2$ ounces, at the 0.10 level of significance.

[Click here to view page 1 of the table of critical values of the t-distribution.](#)¹

[Click here to view page 2 of the table of critical values of the t-distribution.](#)²

Identify the critical region. Select the correct choice below and fill in the answer box(es) to complete your choice.
(Round to two decimal places as needed.)

- ☐ A. $t < \boxed{}$ or $t > \boxed{}$
- ☐ B. $t < \boxed{}$
- ☐ C. $t > \boxed{}$

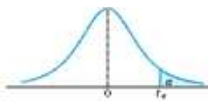

Find the test statistic.

(Round to two decimal places as needed.)

What is the appropriate conclusion for this test?

- ☐ A. Reject H_0 and conclude that the average weight of the bags of white cheddar popcorn is not significantly less than 5.2 ounces.
- ☐ B. Do not reject H_0 and conclude that the average weight of the bags of white cheddar popcorn is significantly less than 5.2 ounces.
- ☐ C. Reject H_0 and conclude that the average weight of the bags of white cheddar popcorn is significantly less than 5.2 ounces.
- ☐ D. Do not reject H_0 and conclude that the average weight of the bags of white cheddar popcorn is not significantly less than 5.2 ounces.

3. Test the hypothesis that the average content of containers of a particular lubricant is 10 liters if the contents of a random sample of 10 containers are 10.2, 9.9, 9.9, 10.1, 9.9, 9.8, 9.6, 10.5, 10.5, and 10.3 liters. Use a 0.05 level of significance and assume that the distribution of contents is normal.

[Click here to view page 1 of the table of critical values of the t-distribution.](#)³

[Click here to view page 2 of the table of critical values of the t-distribution.](#)⁴

Identify the null and alternative hypotheses.

Identify the critical region. Select the correct choice below and fill in the answer box(es) to complete your choice. (Round to two decimal places as needed.)

- ☐ A. $t <$ or $t >$
- ☐ B. $t <$
- ☐ C. $t >$

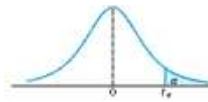

Find the test statistic.

(Round to two decimal places as needed.)

What is the appropriate conclusion for this test?

- ☐ A. Do not reject H_0 and conclude that the average content of containers of a particular lubricant is significantly different from 10 ounces.
- ☐ B. Do not reject H_0 and conclude that the average content of containers of a particular lubricant is not significantly different from 10 ounces.
- ☐ C. Reject H_0 and conclude that the average content of containers of a particular lubricant is not significantly different from 10 ounces.
- ☐ D. Reject H_0 and conclude that the average content of containers of a particular lubricant is significantly different from 10 ounces.

4. A research report claims that mice with an average life span of 32 months will live to be about 40 months old when 40% of the calories in their diet are replaced by vitamins and protein. Is there any reason to believe that $\mu < 40$ if 65 mice that are placed on this diet have an average life of 38 months with a standard deviation of 6.2 months?

[Click here to view page 1 of the table of critical values of the t-distribution.](#)⁵

[Click here to view page 2 of the table of critical values of the t-distribution.](#)⁶

Identify the null and alternative hypotheses.

- ☐ A. $H_0: \mu = 40$
 $H_1: \mu > 40$
- ☐ B. $H_0: \mu \neq 40$
 $H_1: \mu = 40$
- ☐ C. $H_0: \mu > 40$
 $H_1: \mu = 40$
- ☐ D. $H_0: \mu = 40$
 $H_1: \mu < 40$
- ☐ E. $H_0: \mu = 40$
 $H_1: \mu \neq 40$
- ☐ F. $H_0: \mu < 40$
 $H_1: \mu = 40$

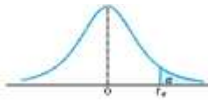

Find the test statistic.

(Round to two decimal places as needed.)

What is the appropriate conclusion for this test?

- (1) _____ H_0 and conclude that there (2) _____ sufficient evidence that mice with an average life span of 32 months will live to be (3) _____ than 40 months old when 40% of the calories in their diet are replaced by vitamins and protein.

ID: Instructor-created question

5. An electrical firm manufactures light bulbs that have a lifetime that is approximately normally distributed with a mean of 800 hours and a standard deviation of 36 hours. Test the hypothesis that $\mu = 800$ hours against the alternative, $\mu \neq 800$ hours, if a random sample of 26 bulbs has an average life of 791 hours.

[Click here to view page 1 of the standard normal distribution table.](#)⁷

[Click here to view page 2 of the standard normal distribution table.](#)⁸

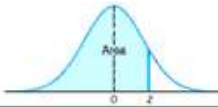

Find the test statistic.

(Round to two decimal places as needed.)

What is the appropriate conclusion for this test?

(1) _____ H_0 and conclude that there (2) _____ sufficient evidence to conclude that the mean lifetime of the lightbulbs is not equal to 800 hours.

- (1) ☐ Reject (2) ☐ is
☐ Do not reject ☐ is not

ID: Instructor-created question

6. An electrical firm manufactures light bulbs that have a lifetime that is approximately normally distributed with a mean of 700 hours and a standard deviation of 40 hours. Test the hypothesis that $\mu = 700$ hours against the alternative, $\mu \neq 700$ hours, if a random sample of 34 bulbs has an average life of 692 hours.

[Click here to view page 1 of the standard normal distribution table.](#)⁹

[Click here to view page 2 of the standard normal distribution table.](#)¹⁰

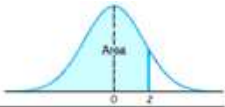

Find the test statistic.

(Round to two decimal places as needed.)

What is the appropriate conclusion for this test?

(1) _____ H_0 and conclude that there (2) _____ sufficient evidence to conclude that the mean lifetime of the lightbulbs is not equal to 700 hours.

ID: Instructor-created question

7. In the American Heart Association journal Hypertension, researchers report that individuals who practice Transcendental Meditation (TM) lower their blood pressure significantly. If a random sample of 236 male TM practitioners meditate for 7.9 hours per week with a standard deviation of 2.23 hours, does that suggest that, on average, men who use TM meditate more than 7.5 hours per week?

State the null and alternative hypotheses.

$H_0: \mu(1)$ _____

$H_1: \mu(2)$ _____

(Type integers or decimals. Do not round.)

Find the test statistic.

The test statistic is .

(Round to two decimal places as needed.)

What is the appropriate conclusion for this test?

(3) _____ H_0 . There (4) _____ sufficient evidence to conclude that, on average, men who use TM meditate more than 7.5 hours per week.

8. The average height of females in the freshman class of a certain college has historically been 162.5 centimeters with a standard deviation of 7.1 centimeters. Is there reason to believe that there has been a change in the average height if a random sample of 48 females in the present freshman class has an average height of 165.6 centimeters? Assume the standard deviation remains the same.

State the null and alternative hypotheses.

$H_0: \mu(1)$ _____

$H_1: \mu(2)$ _____

(Type integers or decimals. Do not round.)

Find the test statistic.

The test statistic is .

(Round to two decimal places as needed.)

What is the appropriate conclusion for this test?

(3) _____ H_0 . There (4) _____ sufficient evidence to conclude that there has been a change in the average height.

9. The average height of females in the freshman class of a certain college has historically been 162.7 centimeters with a standard deviation of 7.1 centimeters. Is there reason to believe that there has been a change in the average height if a random sample of 49 females in the present freshman class has an average height of 165.1 centimeters? Assume the standard deviation remains the same.

State the null and alternative hypotheses.

$H_0: \mu (1)$

$H_1: \mu (2)$

(Type integers or decimals. Do not round.)

Find the test statistic.

The test statistic is .

(Round to two decimal places as needed.)

What is the appropriate conclusion for this test?

(3) H_0 . There (4) sufficient evidence to conclude that there has been a change in the average height.

10. It is claimed that automobiles are driven on average more than 20,000 kilometers per year. To test this claim, 100 randomly selected automobile owners are asked to keep a record of the kilometers they travel. Would you agree with this claim if the random sample showed an average of 22,060 kilometers and a standard deviation of 4100 kilometers?

[Click here to view page 1 of the table of critical values of the t-distribution.](#)¹¹

[Click here to view page 2 of the table of critical values of the t-distribution.](#)¹²

Identify the null and alternative hypotheses.

- ☐ A. $H_0: \mu > 20,000$
 $H_1: \mu = 20,000$
☐ B. $H_0: \mu = 20,000$
 $H_1: \mu < 20,000$
☐ C. $H_0: \mu = 20,000$
 $H_1: \mu \neq 20,000$
☐ D. $H_0: \mu \neq 20,000$
 $H_1: \mu = 20,000$
☐ E. $H_0: \mu = 20,000$
 $H_1: \mu > 20,000$
☐ F. $H_0: \mu < 20,000$
 $H_1: \mu = 20,000$

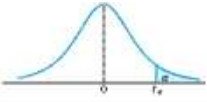

Find the test statistic.

(Round to two decimal places as needed.)

What is the appropriate conclusion for this test?

- (1) _____ H_0 and conclude that there (2) _____ sufficient evidence to agree with the claim that automobiles are driven on average more than 20,000 kilometers per year.
